FOR IMMEDIATE RELEASE

February 5th, 2007

**CI LUMEN'S INNOVATIVE 70 INCH HIGH RESOLUTION
MONITOR CHANGES THE WAY WE'LL SEE THINGS IN THE
FUTURE...**

*As they help support a new Microsoft launch with JCDecaux, CI Lumen's 70 inch monitor
breaks new ground!*

February 5, 2007 – Hauppauge, N. Y. – Since it's inception, CI Lumen Industries has been a technology leader in the LCD industry and now, with the support of Samsung, they have developed a state-of-the-art high resolution monitor that provides first rate reliability and performance. In fact, the monitor was recently chosen by outdoor media giant JC Decaux to serve as the LCD hardware for a program at New York's JFK International Airport celebrating the release of the new Microsoft Windows Vista operating system and 2007 Microsoft Office software packages. The 70 inch monitors incorporate 1920 X 1080 pixel resolution, and were designed around a digital signage specific LCD display panel built by Samsung, one of the world's digital display technology leaders. Together the two companies have created the industry's first 70" monitor which targets digital signage, and related applications (See Photo).

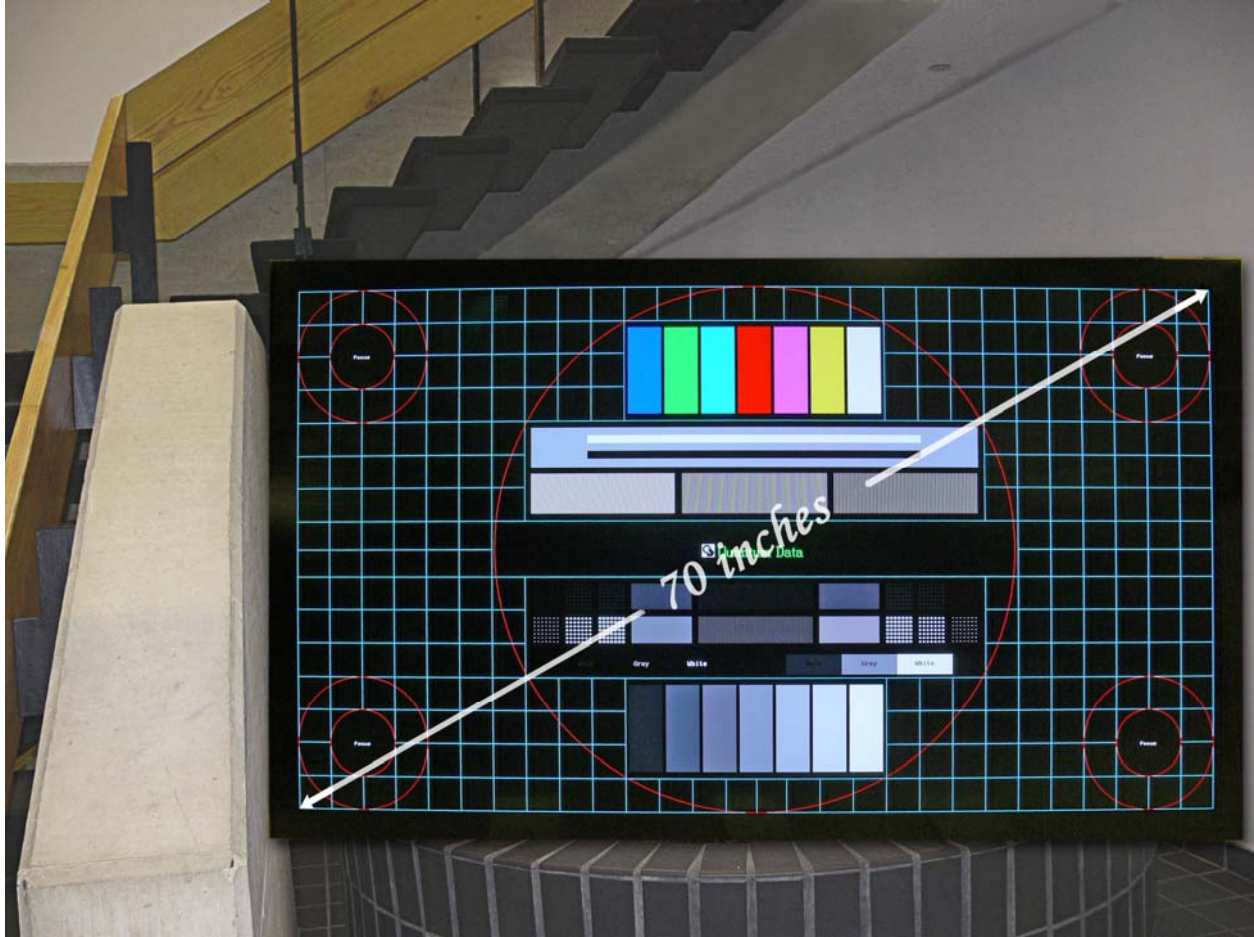

The leading edge large format monitor was selected as the cornerstone of an innovative state-of-the-art 250 foot long digital LCD display fashioned by JCDecaux to publicize the release of Microsoft's newest operating system and software packages. An expedited development program resulting in the final, customized 70 inch monitor, prompted Eric XXXXXX, Director of

CCCCC at JCDecaux to say, “ CI Lumen put forth maximum effort to make this ground breaking display a reality. We thank them heartily for a job well done.”. A mammoth digital mural made entirely of 40 of these stunning 70” monitors, now lines the walls of the tunnel between the old and new American Airlines terminal in New York’s JFK International Airport. It’s believed to be the world’s longest LCD exhibit (see photo).

CI Lumen is currently in production of the state-of-the-art 70 inch monitor, as well as 82, 57, 46 and 32 inch large format versions of these high resolution displays. There are custom options available as well, including anti-glare and anti-reflective viewing enhancements, improved contrast ratio and high brightness options for high ambient light applications. The brilliance of the monitors must be seen to be fully appreciated, but with CI Lumen and Samsung putting their collective resources together the result is an industry milestone, boasting specifications ideally suited for commercial and industrial use. “These digital displays are designed for long term reliability” indicates James Hoffman, Chief Technical Officer for CI Lumen. “We have incorporated leading edge thermal management techniques to assure that these displays will support the 24/7 usage demanded by JCDecaux’s and other digital signage programs”.

ABOUT CI LUMEN

CI Lumen Industries is a member of the CI Group of companies. The company offers a variety of products and services including standard and custom LCD display solutions, optical bonding, LED backlights, touch screen integration, passive film enhancements and active backlight upgrades. Each modification is aimed at advancing the overall visual experience of display solutions. With full-service and active applications engineering staffs and nearly 20,000 square feet of manufacturing space, including superior Class 1000 clean room space, the company offers the flexibility to provide any display enhancement service from prototyping to high-volume production. CI Lumen is SDB certified and participates in the 8(a) business development program conducted by the SBA.
